TODDCO DOCKLEVELERS AND DOCK EQUIPMENT

Our Docklevelers are designed and manufactured in Australia to counter the harsh working environment of warehouses and cool rooms across the country.

DOCKLEVELERS Hydraulic Docklevelers
Container Docklevelers

DOCKSEALS Fixed Head Seals
Adjustable Head Seals
Truckshelters
Inflatable Air seals

DOCKBUMPERS

DOCKLIGHTS

DOCK WHEELCHOCKS

- Superior strength in construction of platform and base frame
- Full height telescopic toe guards to eliminate catching
- Velocity fuse on main cylinder for safety
- 18mm thick heavy duty lips for strength and durability
- Return lines on all cylinders. No mess or oil loss
- Silent smooth operation

TRETIGHT INFLATABLE DOCK SEALS BY COMMERCIAL AND GENERAL COOLROOMS

Tretight inflatable dock seals are far superior to others. They use a 3-phase blower giving maximum power rather than a cheaper single phase under powered blower. This ensures that the seals push hard against the perimeter of the truck. They also have a wrap around section at the bottom of the vertical seals, to seal this section as well. Side seals and head seals meet perfectly to fully enclose and seal the truck giving maximum energy saving. Manufactured from chloroprene rubber, the Tretight inflatable bags have been designed to minimise tearing and are UV and fade resistant. Many options are available on request.

Please Note: 3-Phase Fan draws ambient air from outside the canopy, not within canopy area which is refrigerated air.

Why go to the expense of installing inflatable dock seals if they don't perform, The Tretight Inflatable door seals do perform.

M.T.I. QUALOS HÖRMANN SECTIONAL DOORS

Double-Skinned Steel Sectional Door with High Thermal Insulation by M.T.I. Qualos – Hörmann Doors.

Because the M.T.I. Qualos – Hörmann Sectional Doors open vertically, useful space is not wasted around the opening because the door sections are parked underneath the ceiling, parallel to the ceiling or vertically on the wall, depending on the customers requirements.

Each door panel is supplied with a 42mm thick 100% CFC – free polyurethane rigid foam which gives the door exceptionally good insulating values.

The state-of-the-art operators and controls we offer are manufactured and developed in Hörmann factories throughout Germany.

Perfectly matched components, which have been subject to long duration testing, give you the assurance that your door will perform with absolute reliability.
